

**T**HE DEGREE of Civilization attained by any country can be determined by the number of Automobiles it uses. The Automobile, the Truck and the Tractor are the greatest nation builders of the age. Motor driven machinery is doing the work of the world. Labor owes more to motor driven machinery than any other modern invention.

The Automobile has brought town and country together. It is the prime factor in the movement for better highways. It has eliminated time in making cross country trips, it has reduced the hours of labor and made life a hundred times more pleasant.

The Automobile imparts spirit and energy to its owners and Automobile owners are the Progressive men of every community. No man has done his full duty to himself or his family until he has provided a car for his transportation and for the pleasure of his family.

The motor truck is the great freight car of the nation. It saves time and saves horseflesh and saves labor many a tiresome, wearisome hour.

The Tractor, the Truck and the Automobile have lifted drudgery from the farm. The man who does not use these conveniences is living in the past. He does not avail himself of the opportunities science and invention have placed within his reach.

On the occasion of this National Holiday which has been dedicated to Labor, we would like to call your attention to the automobile mechanic.

Motor driven machinery cannot be as important as man who makes it and keeps it in running order. The automobile mechanic is your friend 24 hours in the day and 365 days in the year. The day never gets so cold or the night so dark that he will not go to you when you are in distress.

He wears greasy clothes and climbs under your car, that you may ride with ease and safety. You never met one of these boys out on the road when he would not sacrifice his day of pleasure to fix your car, that your joys may not be disturbed.

The automobile mechanic studies his profession as the surgeon studies his books. He is conscientious and painstaking in his work and whenever you meet a mechanic, although he wears the greasy suit that betrays his profession yet he is your good friend, and is ready to use his skill that you may not be delayed.

They are a class of workers who have never gone on a strike.
